CHB50W Series

Application Note V22 July 2026

1. Introduction

The CHB50W series offers 50 watts of output power with high power density in an industry standard half-brick package. The CHB50W series has wide (4:1) input voltage ranges of 9-36 and 18-75VDC and provides a precisely regulated output. This series has features such as high efficiency, 1500VDC isolation and a case operating temperature range of -40°C to 100°C. The modules are fully protected against input UVLO (under voltage lock out), output short circuit, output over voltage and over temperature conditions. Furthermore, the standard control functions include remote on/off and output voltage trimming. All models are highly suited to telecommunications, distributed power architectures, battery operated equipment, industrial, and mobile equipment applications.

2. DC-DC Converter Features

- 33-50W Isolated Output
- Efficiency to 87%
- 300KHz Switching Frequency
- 4:1 Input Range
- Regulated Outputs
- Continuous Short Circuit Protection
- Five-Sided Shield Metal Case
- Half-Brick Size Meet Industrial Standard
- UL 60950-1 Approval (Except 28 V_{out})
- Safety Meets IEC/EN/UL 62368-1

3. Electrical Block Diagram

Figure 1 Electrical Block Diagram of CHB50W Series Module

CHB50W Series

Application Note V22 July 2026

5. Main Features and Functions

5.1 Operating Temperature Range

The CHB50W series converters can be operated within a wide case temperature range of -40°C to 100°C . Consideration must be given to the derating curves when ascertaining maximum power that can be drawn from the converter. The maximum power drawn from half brick models is influenced by usual factors, such as:

- Input voltage range
- Output load current
- Forced air or natural convection

5.2 Output Voltage Adjustment

Section 6.8 describes in detail how to trim the output voltage with respect to its set point. The output voltage on all models is adjustable within the range of $+10\%$ to -10% .

5.3 Over Current Protection

All models have internal over current and continuous short circuit protection. The unit operates normally once the fault condition is removed. At the point of current limit inception, the output voltage of converter will be going down into current limit and power fold-back protection.

5.4 Output Over Voltage Protection

The output terminals connect a TVS (transient voltage suppressor) diode. The TVS is used by the function of output over voltage protection to avoid the output voltage increase too high in abnormal condition. If more accurate output over voltage protection is required then an external circuit can be used via the remote **on/off** pin.

5.6 Remote On/Off

The CHB50W series allows the user to switch the module on and off electronically with the remote on/off feature. All models are available in "positive logic" and "negative logic" (optional) versions. The converter turns on if the remote **on/off** pin is high ($>3.5\text{V}_{\text{dc}}$ or open circuit). Setting the pin low (0 to $<0.8\text{V}_{\text{dc}}$) will turn the converter off. The signal level of the remote **on/off** input is defined with respect to ground. If not using the remote **on/off** pin, leave the pin open (converter will be on). Models with part number suffix "N" are the "negative logic" remote **on/off** version. The unit turns off if the remote on/off pin is high ($>3.5\text{V}_{\text{dc}}$ or open circuit). The converter turns on if the **on/off** pin input is low (0 to $<0.8\text{V}_{\text{dc}}$). Note that the converter is off by default.

5.7 UVLO (Under Voltage Lock Out)

Input under voltage lockout is standard on the CHB50W unit. The unit will shut down when the input voltage drops below a threshold, and the unit will operate when the input voltage goes above the upper threshold.

5.8 Over Temperature Protection

These modules have an over temperature protection circuit to safeguard against thermal damage. The module shuts down and latches off when the maximum case reference temperature is exceeded. The module will restart when the case temperature falls below restart threshold.

CHB50W Series

Application Note V22 July 2026

6. Applications

6.1 Recommended Layout, PCB Footprint and Soldering Information

The system designer or end user must ensure that metal and other components in the vicinity of the converter meet the spacing requirements for which the system is approved. Low resistance and inductance PCB layout traces are the norm and should be used where possible. Due consideration must also be given to proper low impedance tracks between power module, input and output grounds. The recommended soldering profile and PCB layout are shown below.

Hand Soldering Information:

Hand soldering is the least preferred method because the amount of solder applied, the time the soldering iron is held on the joint, the temperature of the iron, and the temperature of the solder joint are variable. The recommended hand soldering guideline is listed in following table.

Hand-Soldering Guideline

Parameter	Single-side Circuit board	Double-side Circuit board	Multi-layers Circuit board
Soldering Iron Wattage	90W	90W	90W
Tip Temp.	385+/-10°C	420+/-10°C	420+/-10°C
Soldering Time	2~6 Seconds	4~10 Seconds	4~10 Seconds

The suggested soldering process must keep the power module's internal temperature below the critical temperature of 217°C continuously.

Clean the soldered side of the module with a brush, prevent liquid from getting into the module. Do not clean by soaking the module into liquid. Do not allow solvent to come in contact with product labels or resin case as this may changed the color of the resin case or cause deletion of the letters printed on the product label. After cleaning, dry the modules well.

Cleaning and washing information as following link: [Cincon module washing/cleaning guideline.](#)

6.2 Convection Requirements for Cooling

To predict the approximate cooling needed for the half brick module, refer to the power derating curves in section 6.4. These derating curves are approximations of the ambient temperatures and airflows required to keep the power module temperature below its maximum rating. Once the module is assembled in the actual system, the module's temperature should be monitored to ensure it does not exceed 100°C as measured at the center of the top of the case (thus verifying proper cooling).

6.3 Thermal Considerations

The power module operates in a variety of thermal environments; however, sufficient cooling should be provided to help ensure reliable operation of the unit. Heat is removed by conduction, convection, and radiation to the surrounding environment. The example is presented in section 6.4. The power output of the module should not be allowed to exceed rated power ($V_{o_set} \times I_{o_max.}$).

CHB50W Series

Application Note V22 July 2026

6.4 Input Capacitance at the Power Module

The converters must be connected to low AC source impedance. To avoid problems with loop stability source inductance should be low. Also, the input capacitors (Cin) should be placed close to the converter input pins to decouple distribution inductance. However, the external input capacitors are chosen for suitable ripple handling capability. Low ESR capacitors are good choice. Circuit as shown as below represents typical measurement methods for reflected ripple current. C1 and L1 simulate a typical DC source impedance. The input reflected-ripple current is measured by current probe to oscilloscope with a simulated source Inductance (L1).

L1: 12uH

C1: 220uF ESR<0.1ohm @100KHz

Cin: 100uF ESR<0.1ohm @100KHz

Input Reflected-Ripple Test Setup

CHB50W Series

Application Note V22 July 2026

6.5 Power Derating

The operating case temperature range of CHB50W series is -40°C to $+100^{\circ}\text{C}$. When operating the CHB50W series, proper derating or cooling is needed. The maximum case temperature under any operating condition should not exceed 100°C .

AIR FLOW RATE	TYPICAL R_{ca}
Natural Convection	7.12 $^{\circ}\text{C/W}$
20ft./min. (0.1m/s)	6.21 $^{\circ}\text{C/W}$
100 ft./min. (0.5m/s)	5.17 $^{\circ}\text{C/W}$
200 ft./min. (1.0m/s)	4.29 $^{\circ}\text{C/W}$
300 ft./min. (1.5m/s)	3.64 $^{\circ}\text{C/W}$
400 ft./min. (2.0m/s)	2.96 $^{\circ}\text{C/W}$
500 ft./min. (2.5m/s)	2.53 $^{\circ}\text{C/W}$
600 ft./min. (3.0m/s)	2.37 $^{\circ}\text{C/W}$
700 ft./min. (3.5m/s)	2.19 $^{\circ}\text{C/W}$
800 ft./min. (4.0m/s)	

Example:

What is the minimum airflow necessary for a CHB50W-24S12 operating at nominal line voltage, an output current of 4.16A, and a maximum ambient temperature of 50°C

Solution:

Given:

$$V_{in}=24V_{dc}, V_o=12V_{dc}, I_o=4.16A$$

Determine power dissipation (P_d):

$$P_d=P_i-P_o=P_o(1-\eta)/\eta$$

$$P_d=12 \times 4.16 \times (1-0.83)/0.83=10.22\text{Watts}$$

Determine airflow:

$$\text{Given: } P_d=10.22\text{W and } T_a=50^{\circ}\text{C}$$

Check above power derating curve:

Minimum airflow= 300 ft./min.

Verify:

The maximum temperature rise

$$\Delta T=P_d \times R_{ca}=10.22 \times 4.29=43.84^{\circ}\text{C}$$

The maximum case temperature

$$T_c=T_a+\Delta T=93.84^{\circ}\text{C}<100^{\circ}\text{C}$$

Where:

The R_{ca} is thermal resistance from case to ambience

The T_a is ambient temperature and the T_c is case temperature

CHB50W Series

Application Note V22 July 2026

AIR FLOW RATE	TYPICAL R_{ca}
Natural Convection 20ft./min. (0.1m/s)	3 °C/W
100 ft./min. (0.5m/s)	1.44 °C/W
200 ft./min. (1.0m/s)	1.17 °C/W
300 ft./min. (1.5m/s)	1.04 °C/W
400 ft./min. (2.0m/s)	0.95 °C/W

Example (with heatsink M-C092):

What is the minimum airflow necessary for a CHB50W-48S05 operating at nominal line voltage, an output current of 15A, and a maximum ambient temperature of 60°C

Solution:

Given:

$$V_{in}=24V_{dc}, V_o=5V_{dc}, I_o=10A$$

Determine power dissipation (P_d):

$$P_d=P_i-P_o=P_o(1-\eta)/\eta$$

$$P_d=5 \times 10 \times (1-0.81)/0.81=11.73\text{Watts}$$

Determine airflow:

$$\text{Given: } P_d=11.73\text{W and } T_a=60^\circ\text{C}$$

Check above power de-rating curve:

$$P_d < 20\text{W, Natural convection}$$

Verify:

$$\text{Maximum temperature rise is } \Delta T = P_d \times R_{ca}=11.73 \times 3=35.19^\circ\text{C}$$

$$\text{Maximum case temperature is } T_c=T_a+\Delta T=95.19^\circ\text{C} < 100^\circ\text{C}$$

Where:

The R_{ca} is thermal resistance from case to ambient environment

T_a is ambient temperature and T_c is case temperature

6.6 Half Brick Heat Sinks:

CHB50W Series

Application Note V22 July 2026

6.8 Test Set-Up

The basic test set-up to measure parameters such as efficiency and load regulation is shown below. When testing the modules under any transient conditions please ensure that the transient response of the source is sufficient to power the equipment under test. We can calculate:

- Efficiency
- Load regulation and line regulation

The value of efficiency is defined as:

$$\eta = \frac{V_o \times I_o}{V_{in} \times I_{in}} \times 100\%$$

Where:

V_o is output voltage,
 I_o is output current,
 V_{in} is input voltage,
 I_{in} is input current

The value of load regulation is defined as:

$$\text{Load reg.} = \frac{V_{FL} - V_{NL}}{V_{NL}} \times 100\%$$

Where:

V_{FL} is the output voltage at full load
 V_{NL} is the output voltage at no load

The value of line regulation is defined as:

$$\text{Line reg.} = \frac{V_{HL} - V_{LL}}{V_{LL}} \times 100\%$$

Where:

V_{HL} is the output voltage of maximum input voltage at full load

V_{LL} is the output voltage of minimum input voltage at full load

CHB50W Series Test Setup

NOTE:

C1: for 24V_{in} Models 100uF aluminum capacitor
 for 48V_{in} Models 47uF aluminum capacitor

6.9 Output Voltage Adjustment

In order to trim the voltage up or down, one needs to connect the trim resistor either between the trim pin and -V_o for trim-up or between trim pin and +V_o for trim-down. The output voltage trim range is ±10%. This is shown:

Trim-up Voltage Setup

Trim-down Voltage Setup

Table of trim resistor values

V _{out} (V)	R1 (KΩ)	R2 (KΩ)	R3 (KΩ)	V _r (V)	V _f (V)
3.3V	3	12	18	1.24	0.46
5V	2.32	8.2	NC	2.5	0
12V	9.1	51	18	2.5	0.46
15V	12	82	18	2.5	0.46
24V	20	100	20	2.5	0.46
28V	23.7	150	16	2.5	0.46
48V	36	270	14	2.5	0.46

CHB50W Series

Application Note V22 July 2026

For 5V Rtrim_up decision

$$R_{trim_up} = \left(\frac{R1V_r}{V_o - V_{o_nom}} \right) - R2 \text{ (K}\Omega\text{)}$$

For others Rtrim_up decision

$$R_{adj_up} = \left(\frac{R1(V_r - V_f V_f (\frac{R2}{R2 + R3}))}{V_o - V_{o_n}} \right) - \frac{R2R3}{R2 + R3} \text{ (K}\Omega\text{)}$$

Where:

R_{adj_up} is the external resistor in KΩ

V_{o_nom} is the nominal output voltage

V_o is the desired output voltage

R1, R2, R3 and V_r are internal components and are defined in the table of trim resistor values

For example, to trim-up the output voltage of 5V module (CHB50W-48S05) by 8% to 5.4V, R_{adj_up} is calculated as follows:

$$V_o - V_{o_nom} = 5.4 - 5.0 = 0.4V$$

$$R1 = 2.32 \text{ K}\Omega, R2 = 8.2 \text{ K}\Omega,$$

$$V_r = 2.5 \text{ V}, V_f = 0 \text{ V}$$

$$R_{adj_up} = \frac{5.8}{0.4} - 8.2 = 6.3 \text{ (K}\Omega\text{)}$$

The value of R_{adj_down} defined as:

$$R_{adj_down} = \frac{R1 \times (V_o - V_r)}{V_{o_nom} - V_o} - R2 \text{ (K}\Omega\text{)}$$

Where:

R_{adj_down} is the external resistor in KΩ

V_{o_nom} is the nominal output voltage

V_o is the desired output voltage

R1, R2, R3 and V_r are internal components

For example: to trim-down the output voltage of 12V module (CHB50W-48S05) by 8% to 4.6V, R_{adj_down} is calculated as follows:

$$V_{o_nom} - V_o = 5.0 - 4.6 = 0.4V$$

$$R1 = 2.32 \text{ K}\Omega, R2 = 8.2 \text{ K}\Omega, V_r = 2.5 \text{ V}$$

$$R_{adj_down} = \frac{2.32 \times (4.6 - 2.5)}{0.4} - 8.2 = 3.98 \text{ (K}\Omega\text{)}$$

6.10 Output Remote Sensing

The CHB50W SERIES converter has the capability to remotely sense both lines of its output. This feature moves the effective output voltage regulation point from the output of the unit to the point of connection of the remote sense pins. This feature automatically adjusts the real output voltage of the CHB50W series in order to compensate for voltage drops in distribution and maintain a regulated voltage at the point of load. The remote-sense voltage range is:

$$[(+V_{out}) - (-V_{out})] - [(+Sense) - (-Sense)] \leq 10\% \text{ of } V_{o_nominal}$$

If the remote sense feature is not to be used, the sense pins should be connected locally. The +Sense pin should be connected to the +V_{out} pin at the module and the -Sense pin should be connected to the -V_{out} pin at the module. This is shown in the schematic below.

Note:

Although the output voltage can be varied (increased or decreased) by both remote sense and trim, the maximum variation for the output voltage is the larger of the two values not the sum of the values. The output power delivered by the module is defined as the voltage at the output terminals multiplied by the output current. Using remote sense and trim can cause the output voltage to increase and consequently increase the power output of the module if output current remains unchanged. Always ensure that the output power of the module remains at or below the maximum rated power. Also be aware that if V_{o.set} is below nominal value, P_{out.max.} will also decrease accordingly because I_{o.max.} is an absolute limit. Thus, P_{out.max.} = V_{o.set} X I_{o.max.} is also an absolute limit.

CHB50W Series

Application Note V22 July 2026

6.11 Output Ripple and Noise

Output ripple and noise is measured with 1.0uF ceramic and 10uF solid tantalum capacitors across the output. (48V: 1uF ceramic capacitors only)

6.12 Output Capacitance

The CHB50W series converters provide unconditional stability with or without external capacitors. For good transient response, low ESR output capacitors should be located close to the point of load. PCB design emphasizes low resistance and inductance tracks in consideration of high current applications. Output capacitors with their associated ESR values have an impact on loop stability and bandwidth. Cincon's converters are designed to work with load capacitance to see technical specifications.

CHB50W Series

Application Note V22 July 2026

7. Safety & EMC

7.1 Input Fusing and Safety Considerations

The CHB50W series converters have no internal fuse. In order to achieve maximum safety and system protection, always use an input line fuse. We recommended a 10A time delay fuse for 24V_{in} models, and 5A for 48V_{in} models. It is recommended that the circuit have a transient voltage suppressor diode (TVS) across the input terminal to protect the unit against surge or spike voltage and input reverse voltage (as shown).

7.2 EMC Considerations

Suggested Circuits for Conducted EMI Class A & Class B

(1) EMI and conducted noise meet EN 55032 Class A specifications:

Model No.	C1	C2	C3	C4	L1	L2
CHB50W-24S33	NC	100uF/50V	100uF/50V	2200pF/2KV	Short	3.5uH
CHB50W-24S05	NC	100uF/50V	100uF/50V	2200pF/2KV	Short	3.5uH
CHB50W-24S12	NC	100uF/50V	100uF/50V	2200pF/2KV	Short	3.5uH
CHB50W-24S15	NC	100uF/50V	100uF/50V	2200pF/2KV	Short	3.5uH
CHB50W-24S24	10uF/50V	100uF/50V	100uF/50V	NC	1.5mH	3.4uH
CHB50W-24S28	NC	100uF/50V	100uF/50V	2200pF/2KV	Short	3.4uH
CHB50W-48S33	NC	47uF/100V	47uF/100V	2200pF/2KV	Short	3.4uH
CHB50W-48S05	NC	47uF/100V	47uF/100V	2200pF/2KV	Short	3.4uH
CHB50W-48S12	NC	47uF/100V	47uF/100V	2200pF/2KV	Short	3.4uH
CHB50W-48S15	NC	47uF/100V	47uF/100V	2200pF/2KV	Short	3.4uH
CHB50W-48S28	NC	100uF/100V	100uF/100V	2200pF/2KV	Short	3.4uH
CHB50W-48S24	NC	47uF/100V	47uF/100V	2200pF/2KV	Short	3.4uH

Note:

47uF/100V NIPPON CHEMI-CON KMF series aluminum capacitors, 10uF/50V, C4 is ceramic capacitors

100uF/50V, 100uF/100V NIPPON CHEMI-CON KY series aluminum capacitors

CHB50W Series Application Note V22 July 2026

(2) EMI and conducted noise meet EN 55032 Class A specifications:

Model No.	C1	C2	C3	C4	C5	C6	L1	L2
CHB50W-24S48	NC	100uF/50V	100uF/50V	NC	NC	NC	Short	3.5uH
CHB50W-48S48	NC	47uF/100V	47uF/100V	2200pF/2KV	NC	NC	Short	3.5uH

Note:

C2, C3 NIPPON CHEMI-CON KMF series, C4 is ceramic capacitors, Co min. for Vo: 48V

(3) EMI and conducted noise meet EN 55032 Class B specifications:

Model No.	C1	C2	C3	C4	C5	C6	L1	L2
CHB50W-24S33	100uF/50V	100uF/50V	100uF/50V	3300pF/2KV	NC	NC	0.65mH	1.5uH
CHB50W-24S05	100uF/50V	100uF/50V	100uF/50V	2200pF/2KV	NC	NC	0.65mH	1.5uH
CHB50W-24S12	100uF/50V	100uF/50V	100uF/50V	3300pF/2KV	NC	NC	0.65mH	1.5uH
CHB50W-24S15	100uF/50V	100uF/50V	100uF/50V	2200pF/2KV	NC	NC	0.65mH	1.5uH
CHB50W-24S24	10uF/50V	100uF/50V	100uF/50V	2200pF/2KV	3300pF/2KV	1000pF/2KV	1.5mH	3.4uH
CHB50W-48S33	47uF/100V	47uF/100V	47uF/100V	3300pF/2KV	3300pF/2KV	1000pF/2KV	1.5mH	3.4uH
CHB50W-48S05	47uF/100V	47uF/100V	47uF/100V	3300pF/2KV	3300pF/2KV	1000pF/2KV	1.5mH	3.4uH
CHB50W-48S12	47uF/100V	47uF/100V	47uF/100V	3300pF/2KV	3300pF/2KV	1000pF/2KV	1.5mH	3.4uH
CHB50W-48S15	47uF/100V	47uF/100V	47uF/100V	3300pF/2KV	3300pF/2KV	1000pF/2KV	1.5mH	3.4uH
CHB50W-48S24	47uF/100V	47uF/100V	47uF/100V	3300pF/2KV	3300pF/2KV	1000pF/2KV	1.5mH	3.4uH

Note:

100uF/50V, 47uF/100V NIPPON CHEMI-CON KMF series aluminum capacitors, 10uF/50V, C4, C5, C6 is ceramic capacitors

CHB50W Series Application Note V22 July 2026

(4) EMI and conducted noise meet EN 55032 Class B specifications:

Model No.	C1	C2	C3	C4	C5	C6	C7	L1	L2
CHB50W-24S28	100uF/50V	100uF/50V	NC	NC	1000pF/2KV	NC	NC	0.12mH	0.34mH
CHB50W-48S28	100uF/100V	100uF/100V	NC	NC	1000pF/2KV	NC	NC	0.12mH	0.34mH

Note:

C1, C2 NIPPON CHEMI-CON KY series, C5 is ceramic capacitors

(5) EMI and conducted noise meet EN55032 Class B specifications:

Model No.	C1	C2	C3	C4	C5	C6	L1	L2
CHB50W-24S48	10uF/50V	100uF/50V	100uF/50V	4700pF/2KV	2200pF/2KV	1000pF/2KV	1.5mH	3.4uH
CHB50W-48S48	47uF/100V	47uF/100V	47uF/100V	4700pF/2KV	2200pF/2KV	1000pF/2KV	1.5mH	3.4uH

Note:

100uF/50V, 47uF/100VNIPPON CHEMI-CON KMF series, 10uF/50V, C5, C6 is ceramic capacitors, Co min. for Vo: 48V

CHB50W Series

Application Note V22 July 2026

8. Part Number

Format: CHB50W – II X OO L-Y

Parameter	Series	Nominal Input Voltage	Number of Outputs	Output Voltage	Remote On/Off Logic	Mounting Inserts
Symbol	CHB50W	II	X	OO	L	Y (Option)
Value	CHB50W	24 : 24 Volts 48 : 48 Volts	S : Single	33 : 3.3 Volts 05 : 05 Volts 12 : 12 Volts 15 : 15 Volts 24 : 24 Volts 28 : 28 Volts 48 : 48 Volts	None : Positive N : Negative	C : Clear Mounting Insert (3.2mm DIA.)
